Objective:

Seeking to establish an interesting and challenging career by working in a reowned organization where i can utilize my skills and knowledge with maximum efficency that leads to the growth of the organization and also myself as an individual.

PROJECT:

SPEAKING MODULE FOR DEAF & DUMB USING ANDROID APP:

- This paper aims to provide an interesting application that guarantees ultimate communication with the disabled users and vice versa. The power of this application appears in two aspects: first of all, the ability of normal people to communicate with the targeted people without having any previous knowledge on signs language. This can be either achieved by voice recognition of words or by typing the words in the Arabic language.

- The application displays the appropriate image(s) in the sign language. Secondly, and more importantly, people with special needs communicate with normal people by choosing the signs images on their phones from the numerous categories stored in the databases which express their ideas and thoughts.

Achievements:

- **JAVA** Course completed in CADD computer center.

- Has successfully completed Inplant Training / Internship on "**NETWORKING**" at our Coimbatore branch, Nitroware Technology.
